

Road Weather Predictions Produced by **MetGIS**

G. Spreitzhofer, R. Steinacker
*University of Vienna,
Institute of Meteorology and Geophysics*

Structure of Talk

1. MetGIS basics
2. MetGIS Java GUI
3. MetGIS web interface
4. Operational application and experiences
5. Upgrade plans

MetGIS Basics

What is MetGIS?

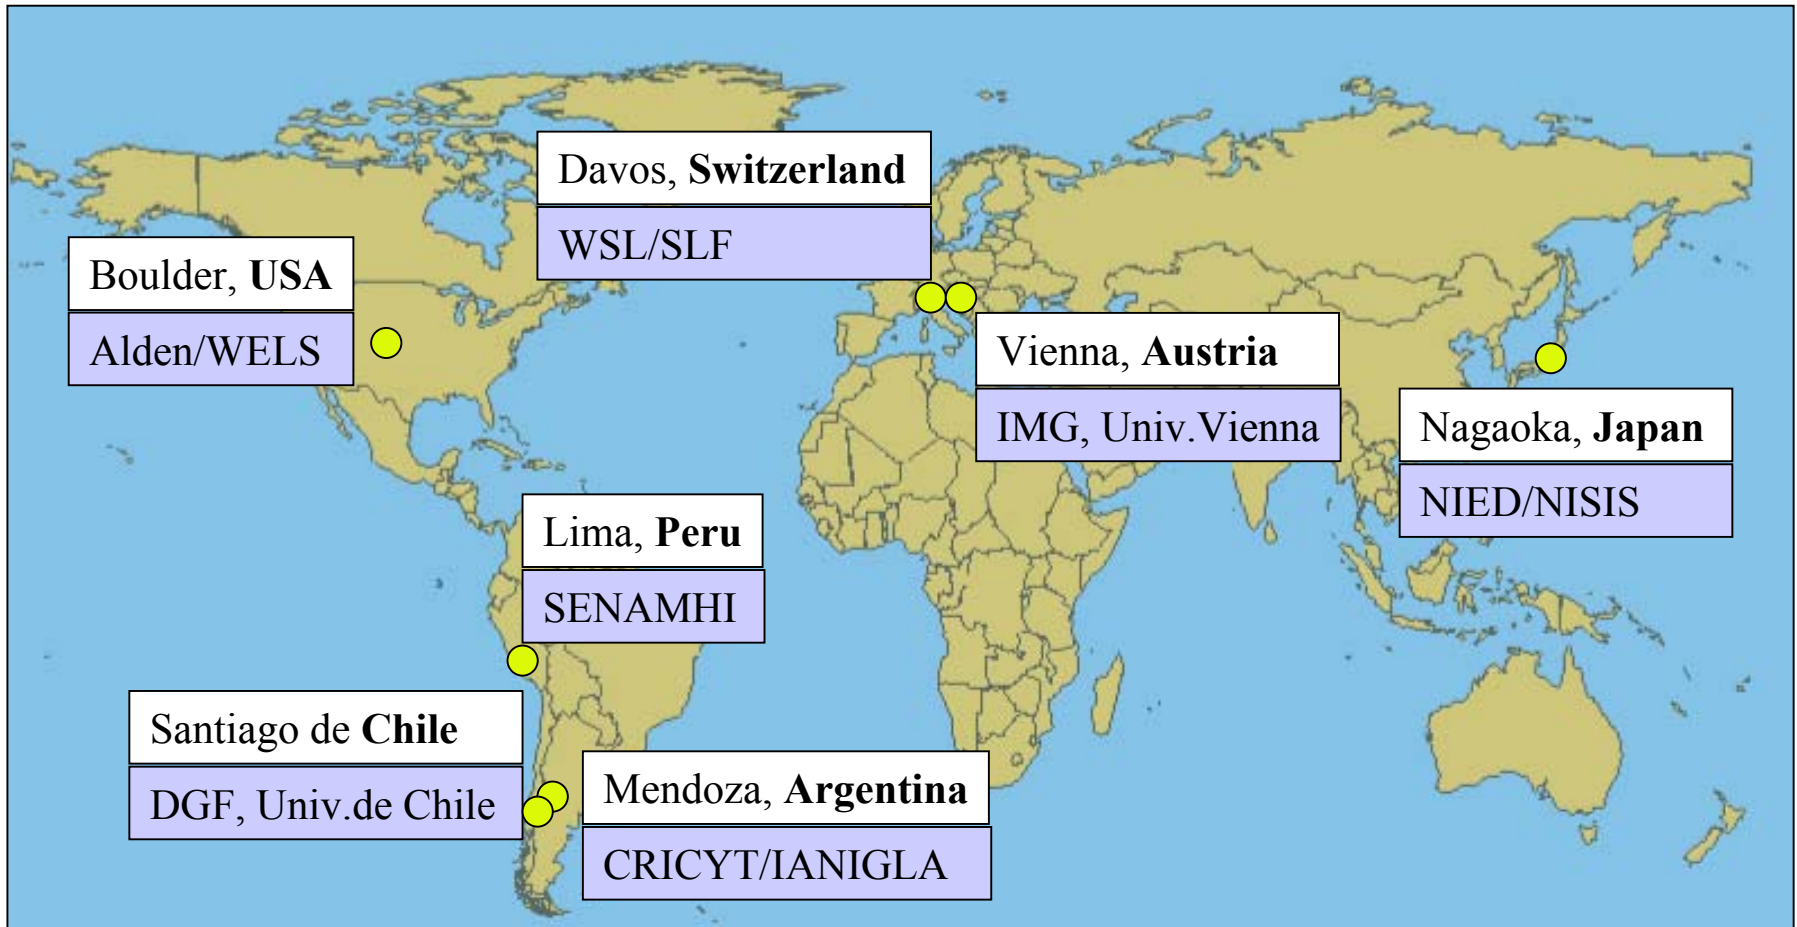

Combined **m**eteorological and **g**eographic information system with a specific focus on snow, mountain areas and the traffic system in alpine terrain.

Principal features:

- Efficient downscaling procedures of meteorological forecast fields over complex terrain, included into an operational system
- Easy international application through use of standard meteorological and geographical data formats
- Excellent graphical user interface allows traffic operation managers easy access to forecasts

MetGIS Development

Why global involvement?

- Use diversified know-how
- Tune MetGIS with different meteorological input models under varying geographic conditions

Research Contributions

| Country/City | Research Institution | Contribution/Achievement |
|-------------------------------|---|--|
| USA (Boulder, CO) | WELS Research Corporation/ Alden Electronics | Basic ideas about combination between GIS and meteo forecast |
| Switzerland (Davos) | SLF (Swiss Federal Institute for Snow and Avalanche Research) | Java technology for GUIs, SNOWPACK visualization |
| Peru (Lima) | SENAMHI (Servicio Nacional de Meteorología e Hidrología) | Start programming Java-based GIS |
| Japan (Nagaoka) | NIED/NISIS (National Research Institute for Earth Science and Disaster Prevention) | Continue GIS, Start programming interface for meteorological forecast models |
| Argentina (Mendoza) | IANIGLA (Instituto Argentino de Nivelología y Glaciología) | Integration of SRTM terrain data |
| Chile (Santiago) | DGF (Departamento de Geofísica, Universidad de Chile) | MM5 forecast integration, WRF forecast integration (in progress) |
| Austria (Vienna) | IMG (Institute of Meteorology and Geophysics, University of Vienna) | Display of observation data, downscaling, GFS fc. integration |

MetGIS Components

MetGIS (Meteorological and geographic information system)

Geographic Information

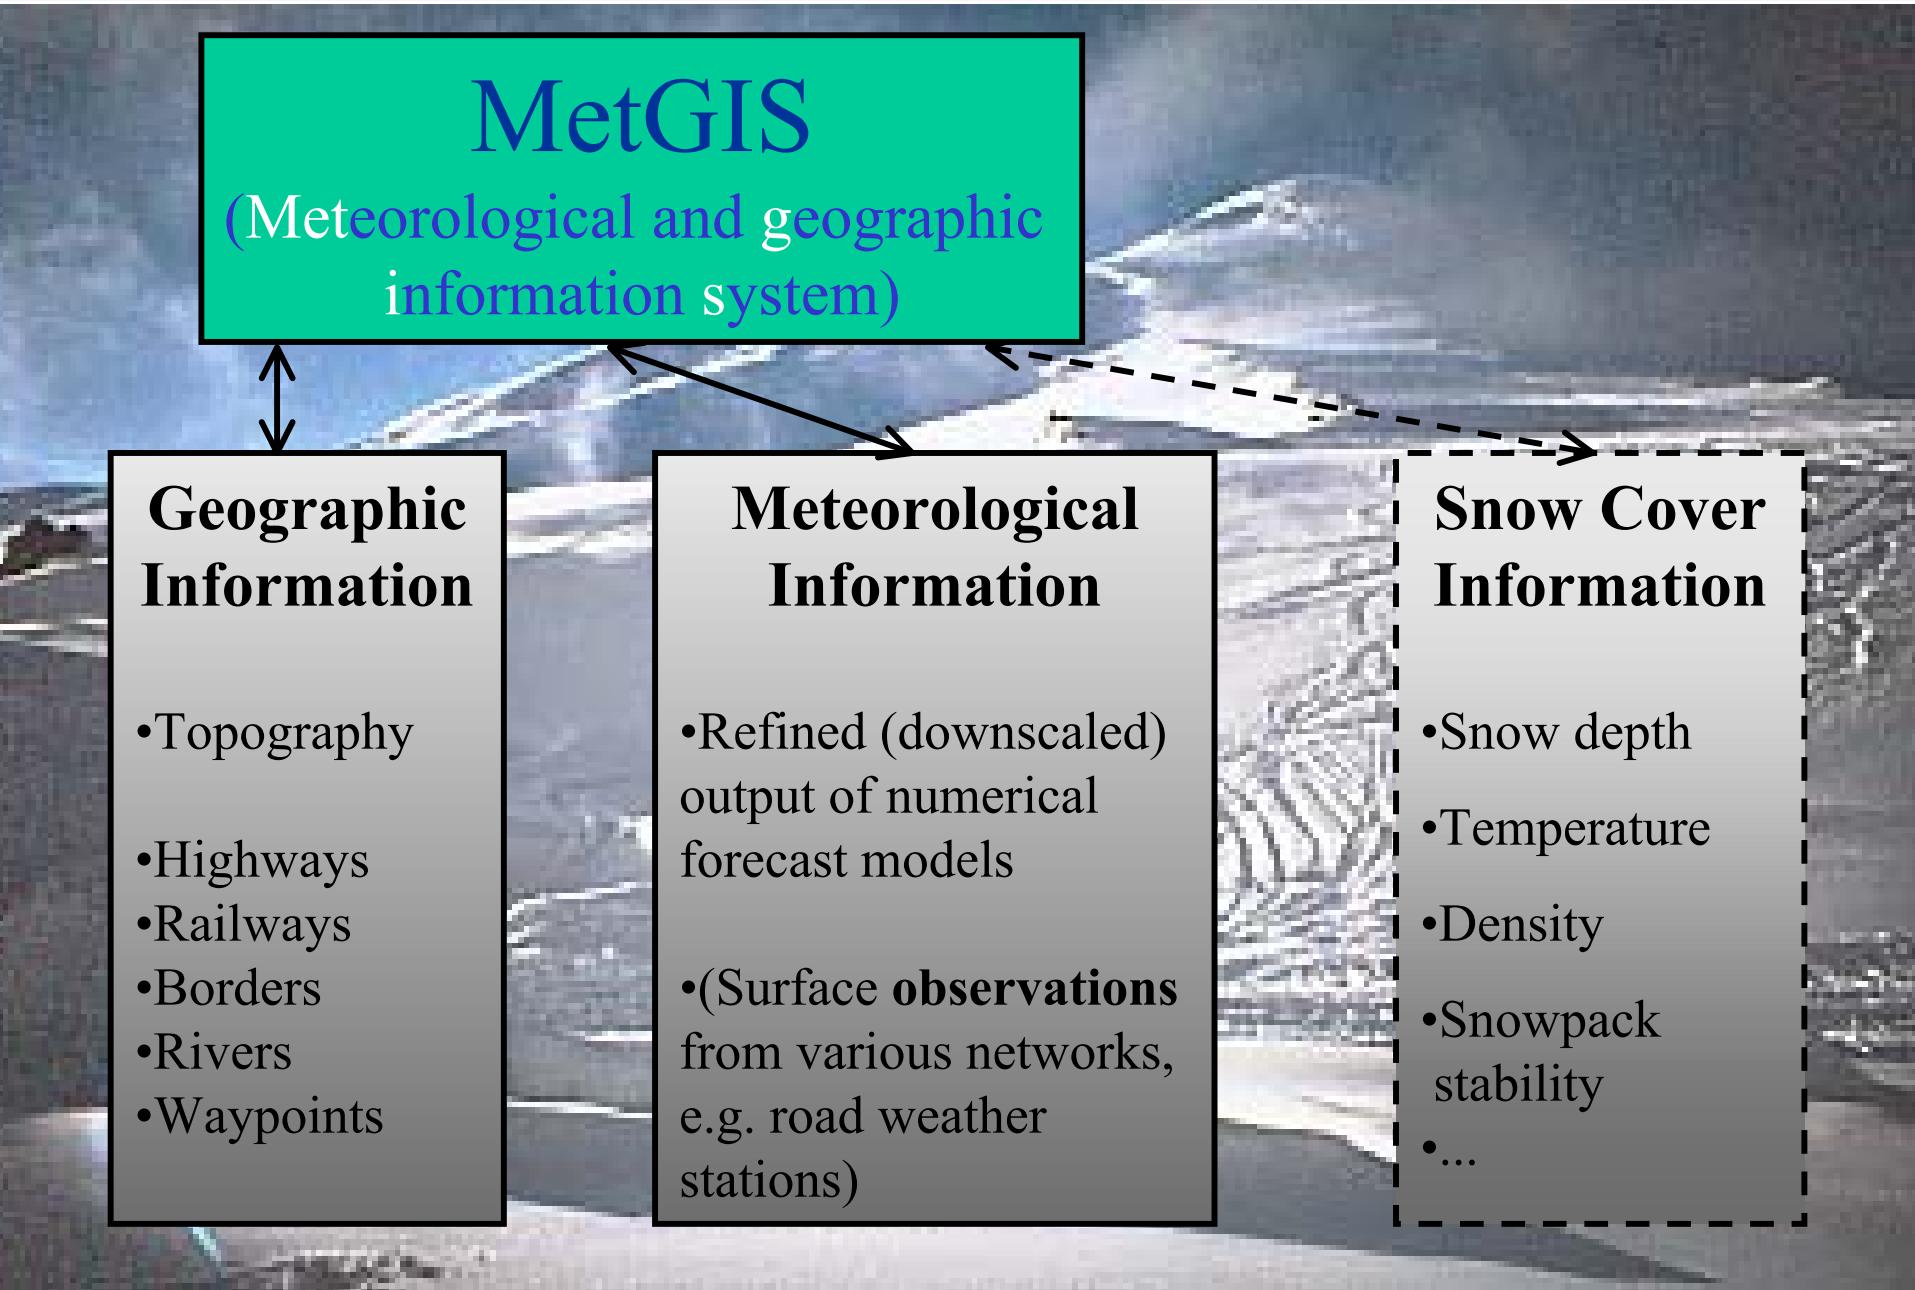

- Topography
- Highways
- Railways
- Borders
- Rivers
- Waypoints

Meteorological Information

- Refined (downscaled) output of numerical forecast models
- (Surface **observations** from various networks, e.g. road weather stations)

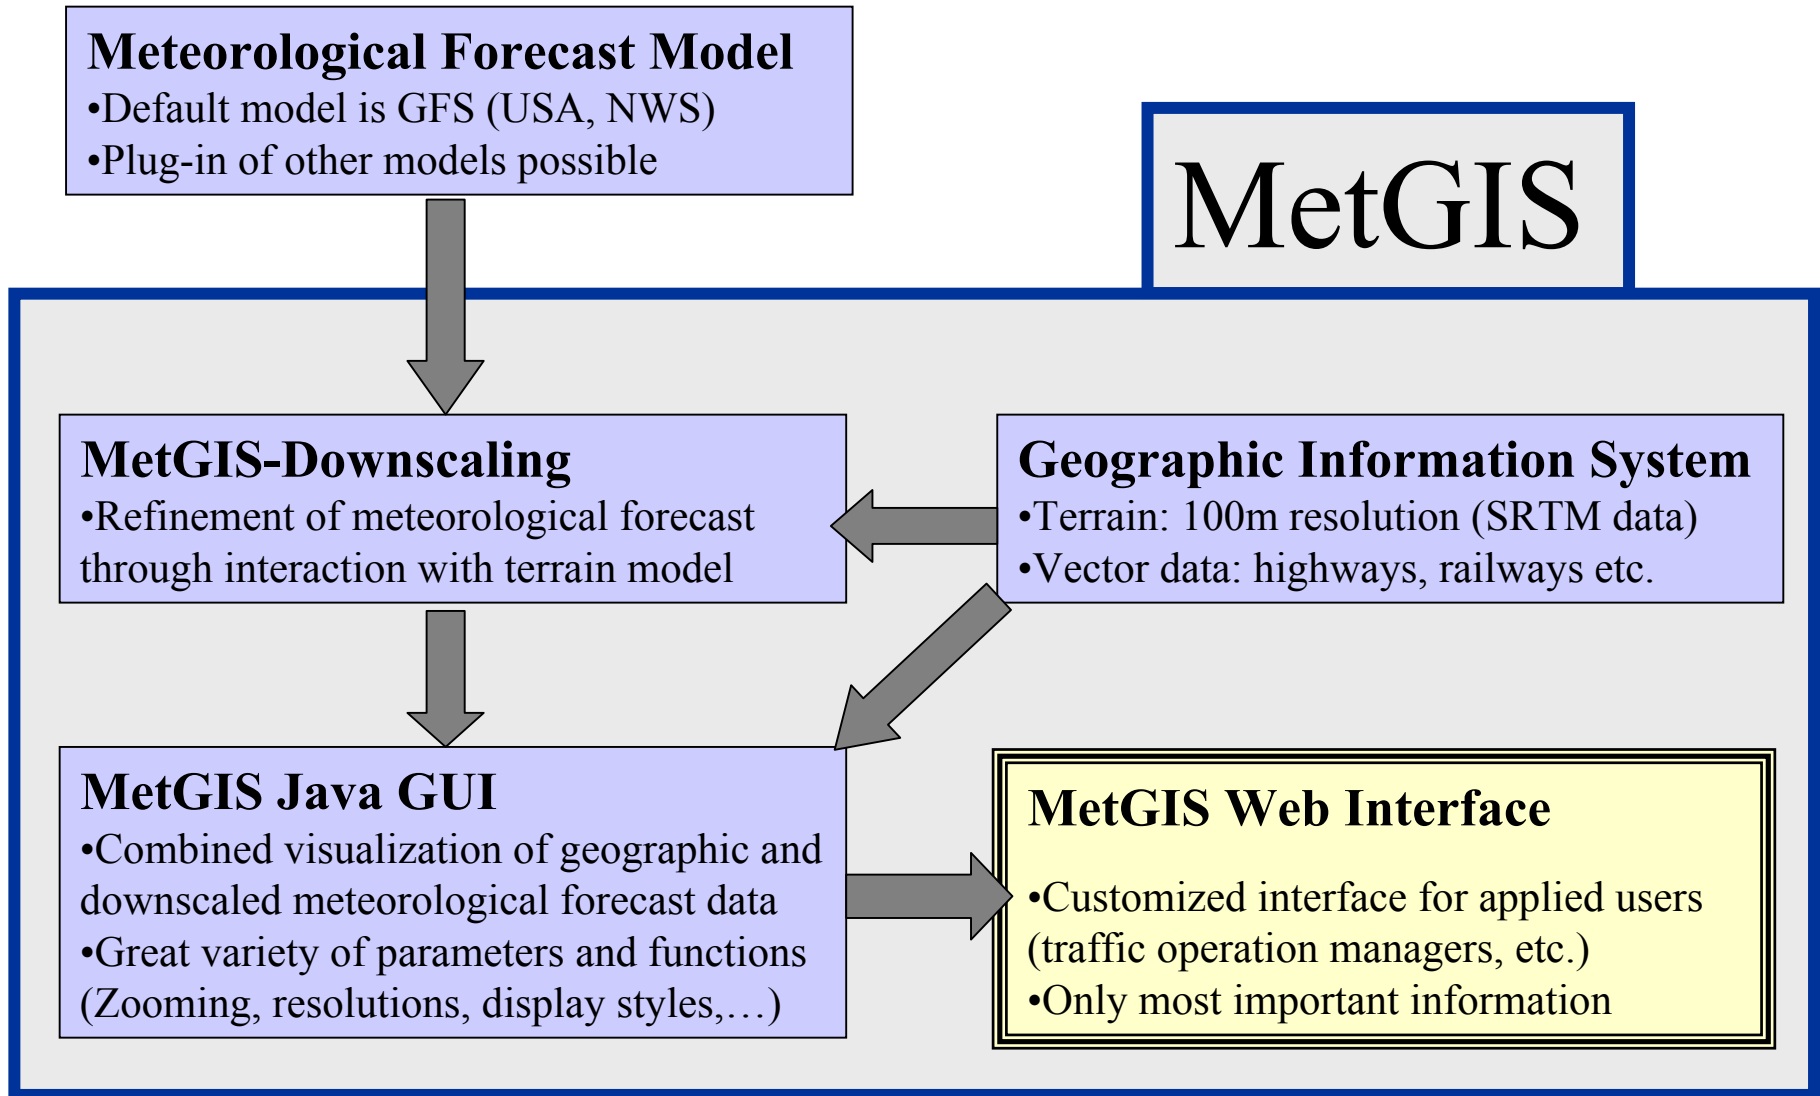

Snow Cover Information

- Snow depth
- Temperature
- Density
- Snowpack stability
- ...

MetGIS Subsystems

<http://univie.ac.at/amk/metgis>

- **Easy-to-use interface** designed for applied users (traffic operation centers, avalanche control centers)
- **Operational 36-hour forecasts** (password-protected)
- **Forecast examples** for various regions (freely accessible)
- **Forecast parameters:** temperature, precipitation amount and type, fresh snow depth, snow limit, wind
- **Languages:** English, German, Spanish

Demo

Demo MetGIS Web Interface

MetGIS Operational Application

- 4 model runs a day at University of Vienna to produce the downscaled graphical road weather forecasts for various regions
- Operation started 2007, first in a test mode involving Austrian highway authorities (constant improvements and adjustments)
- Preliminary user comment: „valuable help“
- Main problem: many traffic operation managers hesitate to use new technology
- Detailed verification study is planned, using last winters MetGIS forecast and observation data

- Upgrades in **forecast quality**:
 - Snow limit (use of valley geometry)
 - Precipitation amounts (use of climatological information)
 - Temperature (energy balance models)
- Inclusion of **observation data** (e.g. from road weather stations) to improve the forecast quality and to detect forecast errors
- Inclusion of MetGIS graphics in foreign road weather information systems (JPGs in web pages, as layer in GIS)
- Point and **line forecasts** (highway sections)
